THE NORTH FACE® WINDWALL™

Ridgeline Soft Shell Jacket

NF0A3LGX

Product Features:

- 306 g/m²/9.0 oz lyd WindWall®, 100% polyester with DWR finish *(solid)*
- 316 g/m²/9.2 oz lyd WindWall®, 100% polyester with DWR finish *(heather)*
- Highly wind-resistant with wind permeability at less than 10 CFM (0 CFM is 100% windproof)
- Drawcord and toggles at hem

Adult sizes: S-3XL

Fabric Features/Benefits:

DURABLE WATER REPELLENT:
DWR is applied to the face of the fabric to provide the first line of defense against wet weather.

WIND PROTECTION:
WindWall® fabrics greatly reduce the effects of wind chill while providing flexibility and breathability to stay comfortable without overheating.

Available Colours and PMS Colours

Textile fabric colours are subject to dye lot variation and will not be exact match to print pantone reference

BLACK

Black C

DARK GREY HEATHER

Cool Grey 11C & Cool Grey 8C

DECORATING INSTRUCTIONS FOR POLYESTER FABRICS

Due to the nature of polyester, special care must be taken throughout the decoration process.
Here are some tips to effectively decorate our performance products.

▪ Garment temperature must not exceed 320°F or 160°C. Exceeding this temperature will cause the fabric to shrink, become or cause dye migration.

▪ Dryer temperature and belt speeds must be changed accordingly for polyester fabric.

▪ If flashing these garments, do not exceed 1-2 seconds. Anything longer may damage the fabric as stated above.

Screen Printing: These garments require the use of poly inks that cures at a lower temperature. A Dyno Grey base blocker colours and a second white base blocker on all dark colours are recommended. Please consult your ink supplier for more inf

▪ Polyester requires a longer cooling time than cotton. Avoid overlap of garments and screen-print/heat transfer until the garr are cooled. Failure to cool the fabric prior to stacking into a printer's fold may cause the fabric and applied ink to stick togetl

Heat Transfers: Poly mark heat transfers need to be created with an anti-migration layer in the design. This process can on done on white or very light colour shirts. Inks used in printing paper design needs to be darker than the base fabric or colour migrate with the fabric colour resulting in a bleeding effect.

Sublimation Printing: As noted for the poly mark heat transfers, this process can only be done on white or very light colou Inks used in printing paper design needs to be darker than the base fabric or colour will migrate with the fabric colour resulti in a bleeding effect.

▪ If you heat press these garments, you must adjust the time, temperature and pressure. Failure to do so may damage the fabric as stated above.

▪ A test sample run is recommended, especially if you have a large order or if your printer does not specialize in printing on performance fabrics.
